

OPPORTUNITY BRIEF · DEMO-IE-FB-0001

Northstar Beverages Ireland

Bottling-line & utilities expansion

A fictional brownfield expansion in County Kildare illustrates project-signal research, not the format required for every account. **Company-level research is the default.** Named-person delivery and outreach are separate, unagreed scopes; this sample authorises neither.

STAGE (EXAMPLE) Design / early package definition	BUYING WINDOW 3–9 months (illustrative)	SCORE (ILLUSTRATIVE) 82 / 100 · Priority	NEXT REVIEW (EXAMPLE) 30 days · not an SLA
--	--	---	---

Executive thesis

Northstar Beverages Ireland appears to be preparing a brownfield bottling-line and utilities expansion at its Kildare facility. Three invented, corroborating signals — a planning application, project-engineering recruitment and a contractor appointment — indicate movement from planning and design toward detailed design and mobilisation.

A supplier of process, utility or automation equipment may still have time to influence key package choices, but the procurement route and incumbent standards remain unknown. The illustrated first action is a technical conversation with the project engineering lead or appointed contractor — not authority to contact anyone.

Why it may matter to you: in this invented scenario, the research questions cover product transfer, CIP capacity, valve automation, utilities, dosing, instrumentation and spares. These are hypotheses, not a technical assessment or evidence of available packages.

Evidence trail · fictional sources and dates

DATE	SOURCE (FICTIONAL)	OBSERVED FACT	EXAMPLE QUALITY
12 Jun 2026	County planning register	Application describes a 2,800 m² production extension and a new external utility area, including plant room.	Primary · authoritative
02 Jul 2026	Company careers page	Senior Project Engineer role requiring bottling-line, utilities and commissioning experience; 18-month contract.	Primary · commercial
21 Jul 2026	Contractor press release	Meath-based engineering contractor announces appointment to a "beverage facility upgrade in County Kildare".	Primary · commercial

Interpretation: the three signals are consistent with a project moving toward detailed design and mobilisation. They do **not** prove that equipment packages remain unselected, that procurement has started, or that any incumbent is displaced. Live source references include retrieval dates; preservation, checksums and customer access depend on source rights and agreed scope.

Illustrative opportunity score

This invented score illustrates analyst prioritisation, not validation, buyer access, buying intent or a revenue forecast.

Likely equipment relevance

- Hygienic product-transfer and CIP pumping
- Sanitary valves and automated manifolds
- Flow, pressure and conductivity instrumentation
- Utility water and wastewater handling
- Dosing and chemical handling
- Compressed air and services
- Commissioning spares and service agreements

Scoped to you: in a live engagement this section is written against your specific product range — not a generic equipment list.

Optional contact illustration

ALL CONTACTS FICTIONAL

Company-level research is the default. Named-person research and contact delivery remain unagreed unless separately scoped and authorised with source, privacy, data and legal controls. Outreach is separate. Badges, sources and dates below are invented, not actual verification; emails use reserved .example domains.

Aoife Brennan

DEMO: VERIFIED

Project Engineering Lead · Northstar Beverages Ireland

Email: aoife.brennan@northstarbev.example

Why her: owns scope, schedule and vendor coordination for the expansion. Likely gatekeeper for package definition.

Fictional source: company site + profile; example check date 2026-08-19

Declan Moore

DEMO: VERIFIED

Utilities & Site Services Manager · Northstar Beverages Ireland

Email: declan.moore@northstarbev.example

Why him: the new utility area lands in his remit; utility-water, air and services packages likely route through him.

Fictional source: trade interview; example check date 2026-08-19

Sinéad Callaghan

DEMO: PROBABLE

Procurement Manager · Northstar Group (fictional)

Email: s.callaghan@northstargroup.example

Why her: group-level procurement appears to run capital purchasing; direct vs. contractor purchasing route unconfirmed.

Fictional source: group announcements; example status: not verified

Rory Fitzpatrick

DEMO: IDENTIFIED

Projects Director · Meridian Process Engineering (fictional contractor)

Email: r.fitzpatrick@meridianpe.example

Why him: his firm announced the appointment; detailed design and several package selections may sit with them.

Fictional source: contractor release; example date 2026-07-21; contact not verified

Known unknowns

- Equipment already specified or framework-bound?
- Incumbent brands and site standards
- Exact line throughput and product characteristics
- Whether the project will be phased
- Who owns detailed design — plant or contractor
- Direct, contractor or EPC purchasing route
- Planned commissioning date
- Which technical risk the team cares most about

Illustrative engagement plan · not outreach authority

Example first action — technical conversation

Example only: a question for the fictional engineering lead or contractor. Any real outreach needs a separately agreed scope and applicable source, privacy and legal authority.

“We’ve been following the proposed production and utility expansion at your Kildare site. Has the team confirmed which production and utility systems are in scope, and whether any pump or valve packages remain under review?”

Illustrative follow-up questions

- Confirm the design and procurement route (plant vs. contractor vs. EPC)
- Identify what the appointed contractor controls
- Map installed standards and incumbent brands
- Establish whether utilities and production are one capital package or several
- Identify the maintenance owner for the service/spares conversation

Re-score triggers

Example review triggers: tender or procurement notice; integrator or EPC appointment; revised planning; utilities application; commissioning recruitment; construction start; supplier announcement. Review timing is agreed, not a standard SLA.

What a live brief adds

- **Company-level research by default;** fields and review timing agreed in writing.
- Traceable sources and retrieval dates; preservation and customer use only where rights permit.
- Named-person research/contact delivery and outreach are separate, unagreed scopes, requiring source, privacy, data and legal authority. Contacts are not guaranteed.
- Product-specific scoring by agreement; outcome review only with authorised client feedback. No buying intent or results guaranteed.

Fictional sample. Prospect companies, people, .example emails, project dates, events and scores are invented. No real validation or outreach authority. The revision date and publisher details are not fictional.
